Report bibliography and evidence notes Prepared 13 October 2026. Citation IDs match the twenty-page report. Individual researcher sources and activity evidence are recorded separately in the directory.

Official statistics and background directory

R1. U.S. Census Bureau. QuickFacts: California. Accessed 13 October 2026. The displayed Hispanic/Latino percentage was 41.2%; median gross rent for 2020–2024 was $2,036. QuickFacts combines indicators with different reference years; the population percentage is not an age-matched faculty denominator. https://www.census.gov/quickfacts/CA

R2. National Center for Science and Engineering Statistics, National Science Foundation. Survey of Earned Doctorates 2024, NSF 25-349, Table 3-3: “Research doctorate recipients, by detailed field of doctorate, citizenship status, ethnicity, and race: 2024.” For neurobiology/neurosciences: 1,238 total recipients; 978 U.S. citizens/permanent residents; 127 Hispanic/Latino domestic recipients. The 13.0% calculation uses 127/978, not the total international-plus-domestic count. https://ncses.nsf.gov/pubs/nsf25349/assets/data-tables/tables/nsf25349-tab003-003.pdf

R3. Fred Hutch Cancer Center. Atlas of Inspiring Hispanic/Latinx Scientists. Publicly curated faculty directory; page dated 29 June 2026 in the examined source. Used as public background recognition, not as proof of nationality or verbatim personal self-identification. The directory itself is not exhaustive. https://www.fredhutch.org/en/about/about-the-hutch/faculty-development/atlas-of-inspiring-hispanic-latinx-scientists.html

Peer-reviewed access, training and academic-career research

R4. Rendon, M. G., Flores, G. M., & Schaefer, D. R. (2025). Navigating the Culture of Biology: Comparing Latinas’ Experience with Asian and Black Undergraduate Women at an MSI. CBE—Life Sciences Education, 24(4), ar50. https://doi.org/10.1187/cbe.25-05-0101

Evidence: full text examined through Europe PMC, PMC12667361. Qualitative California UC-campus study; 35 women, including 21 self-identified Latinas, eight Asian participants and six African American participants. Institution anonymized by the authors. Not a statewide prevalence study.

R5. Estrada, M., Hernandez, P. R., & Schultz, P. W. (2018). A Longitudinal Study of How Quality Mentorship and Research Experience Integrate Underrepresented Minorities into STEM Careers. CBE—Life Sciences Education, 17(1), ar9. https://doi.org/10.1187/cbe.17-04-0066

Evidence: full text examined, PMC6007776. Analytic sample N = 1,015; 40.3% Hispanic/Latino/Latina. Longitudinal associations; not randomized mentoring assignment.

R6. Estrada, M., et al. (2016). Improving Underrepresented Minority Student Persistence in STEM. CBE—Life Sciences Education, 15(3), es5. https://doi.org/10.1187/cbe.16-01-0038

Evidence: full text examined, PMC5008901. Review and recommendations emphasizing institutional accountability; not a California neuroscience intervention trial.

R7. Morgan, A. C., LaBerge, N., Larremore, D. B., Galesic, M., Brand, J. E., & Clauset, A. (2022). Socioeconomic roots of academic faculty. Nature Human Behaviour, 6(12), 1625–1633. https://doi.org/10.1038/s41562-022-01425-4

Evidence: full text examined, PMC9755046. Survey of 7,204 tenure-track faculty across eight fields; 22.2% reported a parent with a PhD. Not Latino-specific or California neuroscience-specific.

R8. Hofstra, B., Kulkarni, V. V., Munoz-Najar Galvez, S., He, B., Jurafsky, D., & McFarland, D. A. (2020). The Diversity–Innovation Paradox in Science. Proceedings of the National Academy of Sciences, 117(17), 9284–9291. https://doi.org/10.1073/pnas.1915378117

Evidence: metadata and abstract examined. Large-scale observational/computational study of approximately 1.2 million U.S. doctoral recipients, 1977–2015. The measures are not a comprehensive definition of scientific quality and are not California Latino neuroscience estimates.

R9. Sealy, L., Saunders, C., Blume, J., & Chalkley, R. (2019). The GRE over the entire range of scores lacks predictive ability for PhD outcomes in the biomedical sciences. PLOS ONE, 14(3), e0201634. https://doi.org/10.1371/journal.pone.0201634

Evidence: metadata and abstract examined. Vanderbilt IMSD cohort of 32 students; 28 completed the PhD at reporting. Small, single-program study; not proof that all selection criteria are nonpredictive.

R10. Chen, C. Y., Kahanamoku, S. S., Tripati, A., Alegado, R. A., Morris, V. R., Andrade, K., & Hosbey, J. (2022). Systemic racial disparities in funding rates at the National Science Foundation. eLife, 11, e83071. https://doi.org/10.7554/eLife.83071

Evidence: full text examined, PMC9708090. NSF administrative data, 1996–2019; more than one million decisions. Hispanic ethnicity and race tabulation changed over time. Descriptive disparities do not independently identify a particular causal mechanism or provide a current California estimate.

R11. Ginther, D. K., Schaffer, W. T., Schnell, J., Masimore, B., Liu, F., Haak, L. L., & Kington, R. (2011). Race, ethnicity, and NIH research awards. Science, 333(6045), 1015–1019. https://doi.org/10.1126/science.1196783

Evidence: metadata and abstract examined. The adjusted ten-percentage-point disadvantage commonly quoted from this study concerns Black applicants relative to White applicants; it is not a ten-point Latino funding deficit.

R12. Maldonado-Vlaar, C. S., & García-Arrarás, J. E. (2024). The Neuroscience Research Opportunities to Increase Diversity Program: Transformative and Successful Research Training Strategies for Undergraduate Students within Hispanic Serving Institutions. Journal of Undergraduate Neuroscience Education, 22(3), A224–A232. https://doi.org/10.59390/zglz3652

Evidence: metadata and abstract examined. Program account from UPR–Río Piedras; not a randomized California outcome comparison. The report uses the described program structure and reported direction toward graduate training, not an invented placement percentage.

R13. Theobald, E. J., et al. (2020). Active learning narrows achievement gaps for underrepresented students in undergraduate science, technology, engineering, and math. Proceedings of the National Academy of Sciences, 117(12), 6476–6483. https://doi.org/10.1073/pnas.1916903117

Evidence: metadata and abstract examined. Meta-analysis: examination data from 15 studies/9,238 students; failure-rate data from 26 studies/44,606 students. Average gap reductions of 33% and 45%, respectively; not California Latino neuroscience-specific effects.

R14. Lopatto, D. (2007). Undergraduate research experiences support science career decisions and active learning. CBE—Life Sciences Education, 6(4), 297–306. https://doi.org/10.1187/cbe.07-06-0039

Evidence: metadata and abstract examined. Student-reported outcomes from research experiences; not a randomized estimate of later PI attainment.

R15. Morgan, A. C., Way, S. F., Hoefer, M. J. D., Larremore, D. B., Galesic, M., & Clauset, A. (2021). The unequal impact of parenthood in academia. Science Advances, 7(9), eabd1996. https://doi.org/10.1126/sciadv.abd1996

Evidence: metadata and abstract examined. Survey of 3,064 tenure-track faculty at 450 computer-science, history and business departments in the U.S. and Canada. Used as broader care-policy evidence, not a Latino neuroscience study.

Professional resources and institutional sources

R16. Society for Neuroscience. Neuroscience Scholars Program. Accessed 13 October 2026. Public program description; check current eligibility and application availability directly. https://www.sfn.org/initiatives/diversity-initiatives/neuroscience-scholars-program

R17. Científico Latino. Team & Mission and linked application/opportunity resources. Accessed 13 October 2026. Resource descriptions are not an independently evaluated intervention effect. https://www.cientificolatino.com/about

Directory. California Researcher Directory, companion to this report, compiled 13 October 2026. Individual entries supply background sources, active-lab evidence, lab/profile links, model

systems and selected paper DOIs. Core and related fields, Spain-origin entries and unresolved leads are separate. The roster does not provide a statewide PI denominator or establish recruitment availability.

Search and access limitations

The review used direct institutional and laboratory pages, web-search results, official datasets, public biographies and Europe PMC records. The named research plugins were unavailable as callable tools and were not used. Some publisher/profile pages returned access errors or generic redirects. Search-engine rate limits curtailed later query expansion. No CAPTCHA was bypassed. Five selected peer-reviewed full texts were examined successfully: R4, R5, R6, R7 and R10. Other cited papers were evaluated through metadata/abstracts, as stated above. No interview, private demographic search, or consent-based statewide census was conducted.
